

# Prior Authorization

## Clinical Edits for the Essential Drug List

Most prescriptions are filled right away when you take them to the pharmacy. But some drugs need to be reviewed by your health plan before they're covered. This process is called prior authorization. Prior authorization focuses on drugs that may have a risk of side effects, a risk of harmful effects when taken with other drugs, potential for incorrect use or abuse, better options that may cost you less and work better, and rules for use with certain health conditions. The drugs listed below need to be reviewed and approved by your health plan before they're covered.\*

We update this drug list on a regular basis, but you can always find the most current information, such as details and updates when you log in at [anthem.com](https://www.anthem.com).

## LEGEND

**PA** = Prior Authorization. Some drugs need to be reviewed and approved before they're covered by your plan. This process is called prior authorization. It looks at drugs that may have harmful side effects, the potential for incorrect use or abuse, options that work better and cost less, and/or guidelines for use with certain conditions.

**QL** = Quantity Limits. Taking too much medicine or using it too often is dangerous and costly. That's why this program may limit how much of your medicine you can get each month. For example, a drug may have a limit of 30 pills for 30 days.

**ST** = Step Therapy. Step therapy means you try medicines in a step-by-step process. The program may require you to start with one medicine before another can be approved.

**DO** = Dose Optimization. This program may change the dosage of your medicine to make it more effective. For example, you may have to start taking a higher dosage once a day rather than a lower one twice a day.
